EXPERIENCE

Mid-level Frontend developer at Eeasy orders *Oct 2024 - present*

Easy Orders is a leading SaaS startup in dropshipping and e-commerce that simplifies the e-commerce experience and ordering process with a remarkable track record of success. With a minimum of 150k daily orders and more than 200,000 stores.

*Achievements***:**

● Mentored junior developers, helping them improve their skills and contribute more confidently to the team, while actively participating in code reviews and providing constructive feedback.

● Customized and extended UI component libraries (Material UI), enhancing brand consistency and reducing development time.

● Contributed technical insights during project planning, influencing architectural decisions, and optimizing for performance and maintainability.

● Improved cross-team collaboration in Agile workflows and upheld high code quality standards through consistent, constructive code reviews.

● Enhanced CI/CD pipelines and developer tooling, reducing deployment times and increasing team productivity.

Junior Frontend developer at Eeasy orders *Aug 2023 - Oct 2024*

*Achievements***:**

● Developed a dynamic page builder tool that enables users to create custom web pages with an intuitive drag-and-drop interface.

● Implemented multi-language support, making the platform accessible to a global audience.

● Crafted diverse and unique e-commerce themes, overcoming the challenge of distinct design requirements.

● Implemented user event tracking and reporting to monitor order completions, form submissions, and spam detection.

● Integrated Firebase Cloud Messaging (FCM) to enable real-time push notifications and improve user engagement.

● Designed and implemented multiple conversion rate focused features to improve sales and user retention.

● Built interactive charts and data visualizations to support better decision-making.

● Implemented a flexible user management system, including role-based permissions and seamless multi-account switching for enhanced administrative control.

● Created a custom freelancing platform to boost engagement and platform utilization.

*Responsibilities***:**

● Build pixel-perfect, responsive interfaces from UI/UX mockups and optimized components for performance and scalability.

● Write clean, maintainable, and well-documented code with thorough test coverage using Jest and React Testing Library, and Refactored and optimized legacy code for performance, scalability, and maintainability.

● Integrate REST APIs to extend application functionality and improve performance.
